

Connect 250 and 350 Drivers for Windows

One of the benefits of Chiron's Connect range is that no special drivers are required.

This makes them suitable for all versions of Windows operating systems.

Just select a 'Standard Modem' driver (if there is a choice, we would recommend 'Standard Modem 33600'), and set the baud rate to 115200 bps to get the maximum use of the ISDN bandwidth.

Simple !
